

BLOCKCHAIN DATA CERTIFICATION

B-Cert certifies registration on the public Blockchain for all file types.

B-Cert works as a notary system guaranteeing the existence and immutability of specific digital content at the date of registration as well as the ownership of the information.

B-Cert protects the content. The hash (fingerprint) of the file is recorded on the Blockchain, but not its content.

Content integrity can be demonstrated at any time and in a transparent way, by checking on B-Cert or by directly querying the Blockchain.

Certify your files and customised messages on public Blockchains

Check if your file is already certified on a Blockchain

Manage your certifications through the control dashboard

Share your certification

Integrate B-Cert in your system via APIs

Case study

CERTIFICATION OF A PRIVATE COMPANY

Design engineers import on B-Cert the design process progress via BIM standards and share them with customers.

Operators on the construction site upload a photo via the B-Cert app on their smartphone, certifying the status of the work. The site manager, accessing B-Cert, shares the certificate and the link of the site's image with the customer.

The director of operations uploads on B-Cert the certification, thus guaranteeing the document's anti-counterfeiting process of cement-compression tests for a given cement casting.

B-Cert certifies all the Company's technical and administrative documents on a daily basis, massively and completely independently, thus guaranteeing the date and immutability of the files.

Case study

CERTIFICATION OF A UTILITY COMPANY

Operators upload a photo of the meter via the B-Cert app on their smartphone, thus certifying the meter reading status.

B-Cert periodically certifies all files massively and completely independently, thus guaranteeing the date and immutability of the readings.

The files are uploaded to a long-term digital storage system, available in case of disputes.

The company's customer receives the B-Cert certification with the invoice and can contact an operator to view the relevant photograph.

ENTERPRISE SERVICES

- Massive Certification System
- Desktop Application
- Personalized Certification Systems on Private Blockchains
- Custom User Accounts for certification
- Access to Private Storage for File Reading
- File Saving on Private Platforms
